

Karmic Lifesciences announces strategic partnership with Seahorse Scientific Services, UK

London, Aug 11, 2008: Karmic Lifesciences (Karmic) and Seahorse Scientific Services Ltd. UK (S3) have announced a strategic partnership to jointly provide end-to-end service offerings in the clinical research and development space to Pharmaceutical, Biotechnology and Medical Device companies on a worldwide basis.

Under the agreement, Karmic and S3 will together provide a comprehensive suite of clinical services encompassing regulatory consulting, clinical trial management, pre-clinical research, bio-analytical research, clinical data management, bio-statistics, medical writing, regulatory submissions, pharmacovigilance and core ECG services.

This partnership will benefit both parties by leveraging Karmic's India and US presence with strong US FDA regulatory knowledge and clinical back office capabilities and S3's UK presence, its strong offerings in the Clinical Design, Core Lab Services and Regulatory Expertise on MHRA guidelines. Besides, S3's strong links with Barts and the London NHS Trust, one of the world's top teaching hospital trusts brings tremendous credibility to the partnership.

"This is a highly synergistic partnership where both partners compliment each other and have capability to provide end-to-end drug development support to global pharma players" said Dr. Art Tucker, Managing Director, S3. "This partnership adds domain depth, geographical breadth and a full spectrum of services along the development value chain. We see it as highly strategic to us" added Nidhi Saxena, CEO, Karmic Lifesciences.

About Karmic Lifesciences

Founded in 2005, Karmic Lifesciences is a clinical research and development support organization with offices in Mumbai and New Jersey. Karmic combines a highly experienced medical team with deep therapeutic expertise, a prolific network of pan India sites and

investigators, a fully CFR Part 11 compliant technology infrastructure and a strong culture of client responsiveness to significantly speed up clinical trials while ensuring strict adherence to ICH-GCP standards and trial budgets.
